

State which generative AI-technology has been used.

- ChatGPT

Describe how generative AI-technology has been used.

- ChatGPT was used primarily as a support tool to improve our language due to us not being native speakers and sometimes being unsure how to best phrase things, based on our own ideas and analyses.

Elaborate on how the output from the AI has been used in the text/project/thesis.

- ChatGPT was used to rephrase and improve the wording of our own ideas. The content and conclusions are entirely our own.
- ChatGPT was used to help shorten the text on the slides sometimes and inspire the thought for the final slide.
